

7 Ways to Know If a SPIDER Mower Is Right for You

1

You have *large, commercial-scale* mowing needs.

Sporting grounds. Amusement parks. Resorts. Waterways. Ski slopes. No matter what your commercial mowing needs are, SPIDER mowers like our [SPIDER ILD02](#) or [SPIDER ILD01](#) are ideal for covering large grounds in a timely, safe and efficient manner.

You have *smaller or residential* landscaping needs.

If you're a homeowner or a smaller landscaping company with less terrain to cover, our compact [SPIDER CROSS LINER](#) and [SPIDER CROSS LINER lite](#) provide the perfect cut, even on the steepest slopes.

2

3

You're looking for *safety*.

If you're concerned about the risk of injury associated with traditional riding mowers, investing in a [SPIDER mower](#) will put your mind at ease. Our remote-controlled mowers allow operators to mow from a safe distance (up to 900 feet away), making safety concerns a thing of the past.

4

You have *extremely steep slopes*.

If you're working with extreme slopes, not only do you need a mower that can actually cut well on an incline, you also need one that can do it safely. [SPIDERs](#) are designed to mow remotely on slopes up to 40 degrees — and 55 degrees with a winch. No other mower can cut uphill at that angle without ruining the terrain.

5

You need *high performance*.

When it comes to productivity and quality, SPIDER is a cut above the rest. Our SPIDER ILD02 can perform the same as 15 workers with brush cutters or one boom mower carried by a tractor. With our patented drive system, you won't need to turn and reposition your mower at every corner, saving time and effort.

You mow a *variety of terrain types*.

If you have to mow park grass, waterlogged fields, heavily brushed areas and everything in between, you need a mower that can handle it all. SPIDER mowers replace the need for having to invest in multiple specialized pieces of equipment and provide quality results for any terrain type. In fact, they're equipped with mulching mower decks that have a four-blade mowing mechanism designed to fertilize lawns without any extra steps.

6

7

You need to mow *under solar panels*.

Need to mow under solar panels? Our SPIDER 2SGS has you covered. This SPIDER model is the only mower on the market designed for maintaining turf on solar farms. It's equipped with a lowered profile for easy access to hard-to-reach areas under panels and has a specially built top cover with open metal on the sides, providing sufficient cooling in extremely hot climates.
